

Hop™

Height-Adjustable Table

PRODUCT SHEET

HAWORTH®

With their telescoping and expandable bases, you can adjust not only the height of Hop tables, but the width as well—from 43-70 inches. That means if you need a table with a different-sized top (up to 46 x 84 inches), it is ideal for retrofitting your existing fixed height tables. Even with the added weight of a larger worksurface, you can count on the expandable base to support it. Also available is an innovative powder-coating process that provides a durable, seamless top without edgebanding. Dependable and affordable, Hop doesn't compromise when it comes to performance and quality.

Height adjustability is a simple solution for an organization to promote movement during the workday. These tables integrate into the existing floorplate because they are simple and functional. They can be placed within traditional desking solutions or replace an entire layout. Pictured: Hop rectangular 29 x 58 inch table with Linen Laminate worksurface and a Smooth Plaster base. Modesty panel is Camp Jamboree.

Easy and efficient

Hop's adjustment control system lets you position your desktop exactly where you want it. Using two dependable motors and a sophisticated track and guidance system, the mechanism lifts and lowers at an efficient 1.4 inches per second. Operation is whisper-quiet—just 50 decibels. The maximum power usage by the Hop table while in operation is 4A /128 W. When not in use it consumes only 0.3 Watts.

Durable performance

The Hop table supports up to 250 pounds, including the worksurface, and meets BIFMA standards. It has a height adjustment range of 25.7 - 51.3 inches, including the top (dual stage). The base width expands and contracts to accommodate various worksurface sizes and shapes. Made from steel, bases come in five colors: Metallic Silver, Metallic Champagne, Plaster Smooth, Charcoal, and Smoke.

Worksurface options

Hop worksurfaces are available in Haworth finishes, including laminates, veneers, and nine powder-coat options. Choose from five shapes and two edge options: edgeband and powder-coat (to be used with powder-coat tops only).
